

CET3-AR-CRA-AH-50F-SH-C2353-113023 (Order no. 113023)

Safety switch with guard locking CET-AR-..., RFID, plug connector M23 (RC18), wire front release (bowden), escape release

- ▶ Closed-circuit current principle
- ▶ Unicode
- ▶ Teach-in input J
- ▶ Monitoring output guard locking OUT
- ▶ Monitoring output door position OUT D
- ▶ Plug connector(s) M23 (RC18), 19-pole
- ▶ Wire front release (bowden), 3 m, automatic return
- ▶ Escape release, 105 mm long

Approach direction

Horizontal

Can be adjusted in 90° steps

Guard locking principle

Power to unlock: On a guard with guard locking based on the closed-circuit current principle, the guard is locked by spring force until the guard locking solenoid is supplied with power. Unlocking is by solenoid force. The term mechanical guard locking is also used.

Unicode evaluation

Each actuator is highly coded (unicode). The switch detects only taught-in actuators. Additional actuators can be taught-in.

Only the last actuator taught-in is detected.

Safety characteristics

Thanks to two redundant safety outputs (semiconductor outputs) with internal monitoring, the device is suitable for:

- ▶ Category 4 /PL e according to EN 13849–1
- ▶ SIL 3 according to EN IEC 62061 Table 4

The OSSD outputs used check their function for short circuits and short circuits with test pulses.

Escape release

This is used for manual release of guard locking from the danger zone without tools.

Wire front release (bowden)

The wire front release permits remote unlocking of the guard locking via a pull wire. Flexible routing of the pull wire permits release of the guard locking in inaccessible installation situations.

Important: The wire front release (bowden) is not a safety function.

LED indicator

LED STATE Status LED

DIA LED Diagnostics LED

LED 1 rd freely configurable

LED 2 gn freely configurable

Terminal assignment
