

## A-C60-A1-161322 (Order no. 161322)

### Actuator A-C60-A1 for CEM-C60 with CES-C04

- ▶ In combination with guard locking solenoid CEM-C60, locking force 650 N
- ▶ With permanently installed transponder for safety switch CES-C04
- ▶ Spring-mounted anchor plate
- ▶ Holding plate surface nickel plated, high corrosion resistance

### Approach direction

Horizontal

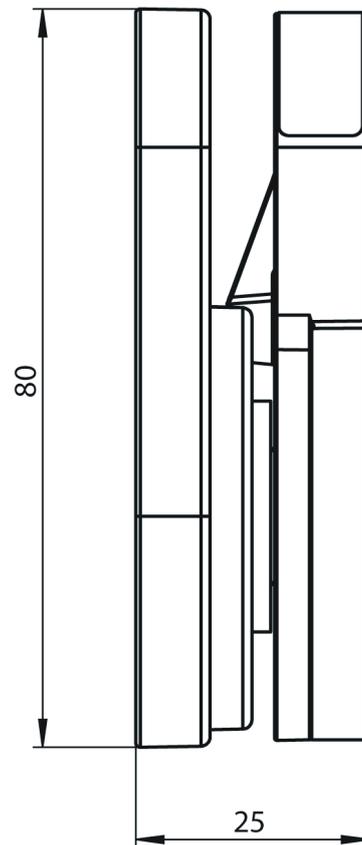

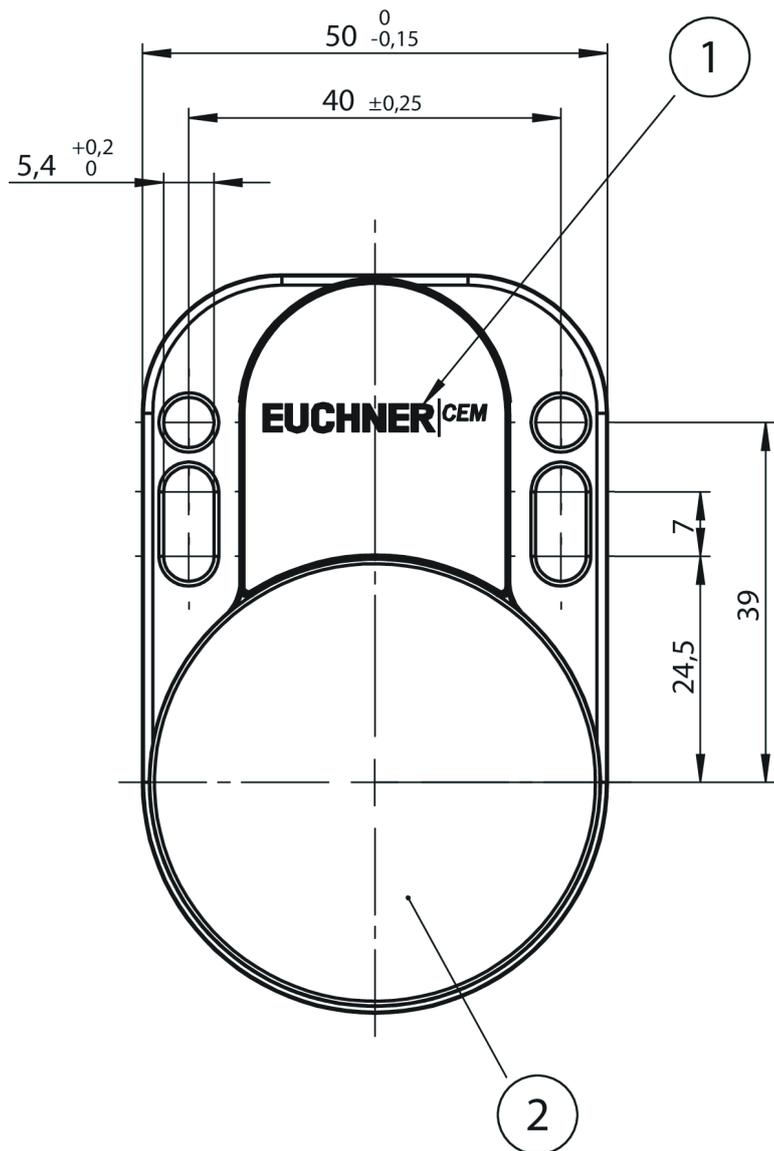

### Actuator

The anchor plate for the CEM actuator has spring mountings and can be tilted to an angle of  $\pm 4^\circ$ . Therefore, when a misadjusted safety door is closed, the CEM actuator automatically adjusts itself to the surface of the solenoid. Subsequent adjustment of the safety door is no longer necessary. Even with a center offset of 5 mm (anchor plate in relation to solenoid) the full locking force is achieved.

## Combinations

Guard locking solenoid	Safety switch	Actuator	Application
